

Revolutionary new creasing concept aimed at customers wishing to crease all types & thickness of board.

Customer Benefits

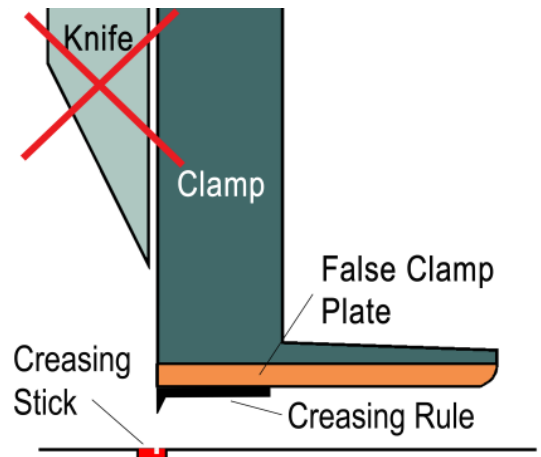

- Excellent creasing results with a variety of material
- Cost-effective creasing compared to traditional creasing methods
- Pays for itself after only one or two creasing runs
- Opens new possibilities to offer added value to your customers

Description of the Machine

The patent-pending product makes it possible to transform any cutting machine quickly and easily into a cost-effective creasing machine.

First, the operator installs the false clamp plate on the clamp of the cutter. Then he exchanges the normal cutting stick with the red "Guillo-Crease creasing stick". The creasing rule has to be placed in the channel of the red creasing stick. The clamp is gently moved downwards by using the foot pedal so that the aligned creasing rule attaches magnetically to the clamp. Thus, the scoring device is installed and the creasing can commence.

If the machine has the function “clamping without cut”, a cutting program can be created to optimize the process. After each scoring process the back gauge automatically sets itself into the next position for creasing.

“Guillo-Crease” contains four different creasing sticks that can be used depending on the material:

Red	200 - 500 gsm 1,5 mm channel
Light Blue	500 - 1.000 gsm 2,5 mm channel
Cream	1.000 - 1.750 gsm 3,5 mm channel
Black	1.750 - 2.250 gsm 4,5 mm channel
