

Pile Turner MOHR PW-1

Fast and automatic turning
of half-size format

Description Pile Turner PW-1

The MOHR PW-1 pile turner is mainly employed for handling the half-size format and works at a high speed - saving costs and power. The pile to be turned is moved onto the platform from one side of the unit. Two push buttons must be pressed to close the platform. After another key is pressed, the platform is turned around its horizontal axis and onto the opposite side of the unit. Two push buttons are pressed (and kept pressed) to open it again. Finally, the turned stack can be moved out of the platform. Any damages or markings that cannot be avoided when the material is restacked manually are almost completely ruled out by automatic reversal. The MOHR PW-1 pile turner must be fastened to the floor with anchors.

Customer benefits

- There are no long waiting times caused by manual re-stacking
- Saves the material and prevents damages
- Improves ergonomic conditions, the lifting of heavy loads is avoided

Technical Data

Format max	640 x 740 mm
Size of platform	675 x 836 mm
Pile height, min (incl. 2 pallets)	470 mm
Pile height, max (incl. 2 pallets)	1255 mm
Carrying capacity max	500 kg

Edition: 05.2019 \ Subject to technical alterations.
